

TRADITIONAL MARQUEES

Our traditional marquees are made in sections so they are lighter to carry and easier to erect. Smaller marquees up to and including Q15 have a one piece roof and a central pole. Two sections of walling allow the doorway to be placed in any position. Marquee walls are 6'/1800mm high allowing you to stand upright over the total ground area.

All marquees come complete with roof canvas, walling, main pole(s) (split into two halves and sleeved together for more convenient handling and storage), 6'/1800mm wooden side poles, guy ropes with hardwood runners, hand cleft hardwood pegs and mallet. The canvases are supplied in easy to pack and carry valises.

A marquee can be used as a roof shelter only. The walls are separate and can be hooked on and taken off as required.

Erecting marquees is quite simple providing the instructions are followed, however, because of the weight of canvas, adult supervision

is advised. For larger marquees (Q22 and upwards) the roof is manufactured in sections - e.g. The roof of a Q22 marquee is made in two halves and laced together across the centre. The marquee can then be extended at a later date by simply purchasing a further section. Adding a 10'/3050mm centre section would convert a Q22 marquee to Q32. Similarly, add another 20'/6100mm section and your original marquee becomes 20'/6100mm x 50'/18300mm.

Canvas marquees are manufactured from 15oz/509gsm 'A' grade cotton duck for both roof and walls. The canvas is fire retardant to BS7837 (1996) and is rot, water and mildew repellent. PVC marquees are manufactured from 1000 denier PVC coated polyester which is fire retardant to European regulation M2 and ultra violet stabilised to protect against the rays of the sun and prevent cracking at low temperatures. A lacquer finish facilitates easy cleaning.

CODE	MARQUEE SIZES		PVC M2 ROT, WATER & FIRE COLOUR WHITE
