### **NARROWBOATS - GENERAL GUIDE**

### Cruising

- Most canals are saucer shaped, being deepest in the middle.
- □ Few canals have more than 3-4 ft of water and many have much less.
- Keep to the centre of the channel except on bends, where the deepest is on the outside of the bend.
- □ When you meet another boat, keep to the right, slow down, and aim to miss the oncoming boat by about 2 meters (2 yards 6feet)
- □ When overtaking, keep the other boat on you right side (overtake on left).
- If you meet a loaded commercial boat, keep out of its way and be prepared to follow instructions.

## **Speed**

- □ There is no need for speed on a canal. General speed limit is 4mph.
- If your wash is breaking against the bank slow down.
- When passing moored craft slow down.
- When passing anglers on the bank slow down. Be courteous.
- □ When there is a lot of rubbish on the surface, drift over it in neutral.

# **Mooring**

- Generally speaking you may moor where you wish on British Waterways property so long as you do not cause an obstruction.
- Do not stretch mooring ropes across footpaths. Use the steel pins provided on your boat to anchor.

### **Bridges**

On narrow canals aim to miss one side (normally the tow-path side) by about 9 inches.
Keep everyone inboard when passing under bridges.

## **Safety**

- Do not leap about the boat, especially the decks. No running.
- Do not run about the roof of the narrowboat, especially in locks.
- When walking the side of the boat, hang on securely to the handrails.
- Non swimmers and young children should wear life jackets.
